### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. §103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. §103(a) as being unpatentable over the prior art identified in figures 1 and 2 of this application in view of any one of Lester (US 2639481), Howe, Jr. (US 3110945) or Vogiatzis (US 4071964).

Figures 1 and 2 of this application are identified as prior art and show a woven shoelace wherein the tying section is integrally woven to form a plurality of bulge parts and narrowed parts that alternate with each other in a sequence. The difference is that the passage section does not have the alternate bulged areas and narrowed areas continued therein. However, Lester (figure 1) teaches that it is desirable ("needless to say") to have the bulged sections 14 be not only in the tying section as shown but also in the passage section (col. 2, lines 3-10), Howe, Jr. (figures 1-3) teaches that it is desirable to have the bulged sections 20, 20' be not only in the tying section as shown but also in the passage section in order for creation of the lace to be more economical and to engage the eyelets in the shoe so as to prevent slippage (col. 4, lines 14-33) and Vogiatzis (figures 1, 2) also teaches that it is desirable to have the bulged sections 6 not only in the end portions of the lace, but also the passage portions (col. 1, lines 25-34, 44-46). As the body of art in this field of endeavor, as exemplified by Lester, Howe, Jr. and Vogiatzis, shows that it is beneficial to extend the bulged and narrowed portions over the central passage portion

of the shoelace for many reasons as identified above, it would have been obvious to modify the prior art figures 1 and 2 so that the bulged and narrowed portions extend over the central passage section as taught by any one of Lester, Howe, Jr. or Vogiatzis.

As to claim 2, the prior art figures 1 and 2 of this application teach a protruded arc shape section for the bulge parts.

In regard to claim 3, the prior art figures 1 and 2 of this application teach a round straight column for the narrowed parts.

### ***Conclusion***

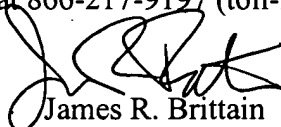

The patents of Taft (US 2141802, figures 1, 2), Abraham et al. (US 5673546, figures 3, 4) and Coblentz (US 5920970, figures 1-6) teach pertinent shoelace structure.
